QuakeSlide: Prompt Earthquake-Triggered Landslide Impact Assessment

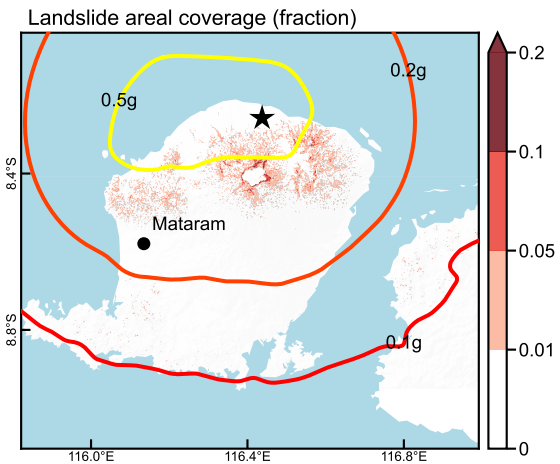

Report created:	2026-11-10 05:42:03 UTC
Ground-motion source:	Custom PGA/PGV rasters
Place:	36 km NW of Labuan Lombok, Indonesia
Magnitude:	Mw 6.9
Time:	2018-08-05 11:46:38 UTC
Epicenter:	8.258°S, 116.438°E
Depth:	34.0 km

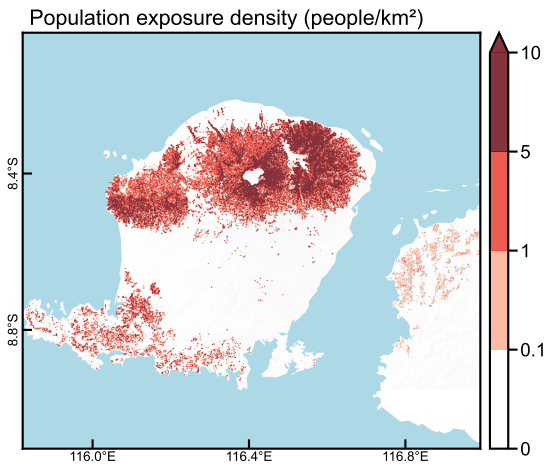

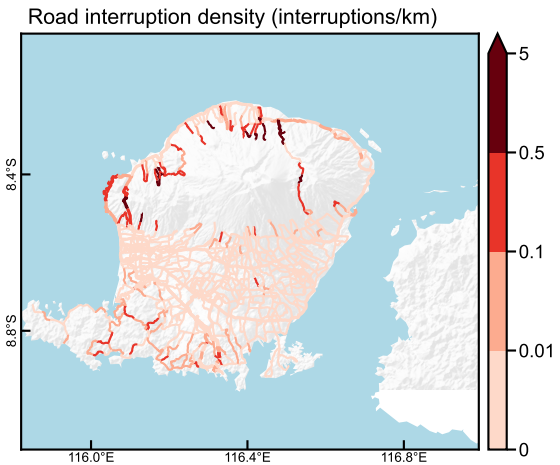

Event-scale severity estimates

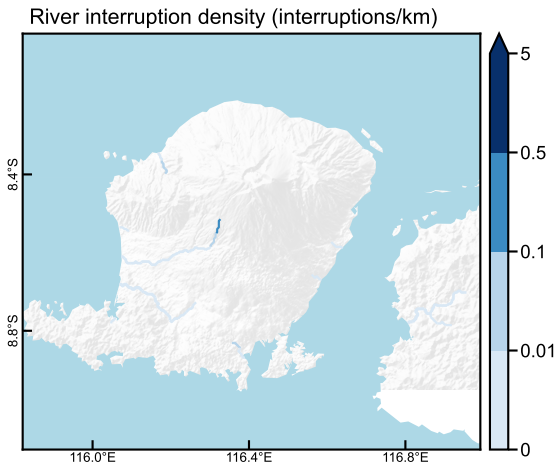

Spatial mean estimates

This report provides first-order quantitative estimates of potential earthquake-triggered landslide hazards and impacts.
Earthquake information and ground motion data are sourced from the USGS ShakeMap.
Estimates can be updated when revised ShakeMap products or preliminary landslide observations become available.
